Keywords: Uzbekistan, labor activity, work with employment, age composition, gender, education level, statistics analysis, birth, death, average young.

Introduction

Labor resources every one of the country economic stability and in development important role plays . Uzbekistan The Republic is also socio-economic development strategy done in increasing population work with busyness increase and labor market effective organization to grow important from tasks is one of the population age , gender and education level according to work with employment level analysis labor in the market trends determination , worker power Optimal allocation of resources and state policy in formation basis become service does . Labor activity and work with employment concept

Labor activity is person's economic in activity , especially worker power as participation process . With work employment level and labor resource which part active work with is engaged in shows . This indicator not only economic growth and stability in evaluation , perhaps labor in the market problems also important in determining importance has .

Population young according to work with employment level

Population young of the composition work with employment level young to groups looking at noticeable difference Research this shows that 18–30 year olds youth between work with employment level is relatively low , and their most education in the process or qualification increase in courses participates . 30–50 years old worker power and the most high work with employment to the level has , because this group active labor in the market complete participates . From 50 years old high population work with employment and natural accordingly decreases , this and pension to age approach with depends .

Gender according to work with employment level

Uzbekistan labor in the market men and women between work with employment level noticeable to differences has . Men usually industry , construction and in the transport sectors high work with employment indicators has if , women and more service display , trade and education in the fields activity They are running . With this together , gender- based work with employment level differences state policy and social programs through is being attempted to reduce .

Demographics statistics - socio-economic statistics from the fields one population number , composition , population or his/her groups location and repetition harvest to be with related information statistic from methods used without collection , re work , expression and analysis to do activity with is engaged in .

Uzbekistan Republic of permanent population Number as of July 1, 2024 , thousand people .

As of July 1, 2024 permanent population number 37,134.2 thousand people organization reached , from which men number 18,696.7 thousand people , women The city has a population of 18,437.5 thousand people . population The population is 18,940.4 thousand people , rural population number 18,193.8 thousand people organization reached .

The population average age this is the population young of the composition approximate general description . It is general population in the content all people

of the youth average arithmetic value as is considered . Average young this is the population number in terms of equal was two to the group divided young is , their first half young , second half and large . As of January 1, 2024 according to men's average If the age is 28.5 , women average The age was considered to be 30.0 years To work competent aged population Number – Labor to the codex suitable for ages 16 to 60 was men and from 16 to 55 years old was from women organization finds (up to 16 years old) was children and teenagers to work competent from age juniors , 60 years old and from it big men and 55 years old and from it big women to work competent from age adults to the category will be allocated). Accordingly, as of January 1, 2024 according to total to work competent from age small population 32.0%, total to work competent of age population 56.4%, labor competent from age big population 11.6% of the population organization reached .

The population young composition this is the population to age looking at distribution . Build it for often one annual and five annual intervals Age group this is general age and other features with combined people Demographic group to groups infants (up to 5 years old), children (5-13 years old), youth (14-30 years old), middle young people (31-59 years old), elderly people (60 years old and from it adults) are included .

Population young groups and gender according to distribution:

As of January 1, 2024 Uzbekistan Republic of permanent population the composition gender and age groups (up to 65 years old) those who have been 5 years young in the interval , 65 and from it high ages and concentrated without) analysis when done , men up to 5 years old was children the most high indicator , i.e. 2,262.7 thousand people organization Men in the composition the most less population number of people aged 60-64 to the extent right arrived , 657.0 thousand people organization Also , women up to 5 years old was girls the most high indicator , i.e. 2,108.1 thousand people organization reached if , the most less women number of people aged 60-64 to the extent right arrived , that is, 736.0 thousand people organization reached .

At birth expected life duration – people born (age 0) expected average life see years number. In this case , indicator calculated in the year youth according to death level preserved is considered to remain .

Population marriage level of people material , spiritual educational needs satisfy processes representative many complex , intricate socio-economic is a category .

Marriage level population income , expenses , consumption level and his/her structure , with housing provision and this like cover takes . That's why economic for in literature population marriage level various indicators system with expressing them various characters be according to to groups those who separated Professor Yo.Abdullayev population marriage level one indicator with not , population income and of life various edges representative indicators system with expression It is necessary , he writes . This system following main sections own inside takes :

- generalizing synthetic indicators ;
- population material needs satisfy level descriptive indicators ;
- population educational - spiritual level descriptive indicators ;
- population social conditions descriptive indicators '.

Economist K. Khaqberdiev " Population marriage concept as wide 4 directions in the sense indicators cover takes : of the population quality indicators , population marriage level , social safety , environment " quality " indicating the first direction indicators:demography , population repetition working release indicators , families formation abilities , education and professional skills degrees enters .

Conclusion

2024 Uzbekistan population labor activity analysis showed that the population number and to work competent citizens number growth labor in the market positive trends confirms . With work employment level various demographic in groups Although the population differs number big part economic in activity is participating .

Age structure analysis this shows that age groups work with employment education and qualification increase to the processes related without changes , medium aged worker power and the most high activity to the indicator has . Sexual content according to analysis and men and women between work with employment in the directions the differences shows : men industry and construction in the fields of women and service display , trade and education in the fields active works .

Marriage level work with to employment noticeable impact shows : life built individuals family obligations because of work with employment level high at the level keeps . Population number big to be and above demographic trends into account received without this analysis labor market development , worker strength

effective distribution and socio-economic politics in formation important source as service does .
